

Net.Reports

for Unix, Linux, and Windows Systems

Net.Reports will be a crucial part of your day-to-day business:

- *Easy archiving of the reports you need*
- *Reports are fully searchable—at a text-based level!*
- *Ability to sort and store reports provides important information backup security*
- *Clean, clear reports are easy to view, and read*
- *Provides a paperless audit trail*
- *Net.Reports are printable, faxable, and capable of being e-mailed*
- *Reports are stored as pdf files—making them accessible to anyone you want*

Net.Reports

Access, archive, and search your reports using a clear, intuitive, easy-to-use interface!

In the pursuit of a truly paperless office, we have developed Net.Reports—an extraordinary tool for accessing reports generated by your ERP System. With Net.Reports, you can access, archive, and search your reports, all electronically, and all in a few easy steps.

Paperless Reporting

Net.Reports provides a complete, paperless audit trail. There's no need for printing out reports or using cumbersome conversion software, just to view information—now, you can get the data you need right off of your computer screen! This translates into significant time and cost savings over some organizations' more traditional method of distributing report information via printed copies.

Net.Reports converts your system reports into clean, easy-to-view PDF documents. These documents can be stored where *you* want them, in predefined folders, then easily accessed by anyone you want, by performing a search using our sophisticated Net.Reports search engine.

Net.Reports Security

Net.Reports offers information security in two ways:

First, it offers information access security. For every report type run, you have the ability to assign permission to access that report to specific users. For example, if you'd like only your managerial staff to have access to a certain type of financial report, such as month-end profit reports, you can assign permission to access those reports to only those people in management positions.

Second, Net.Reports offers your business enhanced information security in the form of backed up report data. With Net.Reports, your reports are stored electronically, which is not only a benefit in paperless terms, as mentioned previously, but also in terms of information backup, and the ability to preserve data in the face of disaster or loss.

Powerful Report Searching

The Net.Reports search engine goes above and beyond most search engines, providing not only flexibility in your search choices (search by word, phrase, etc.), but also a greater depth to your search. Instead of searching based only on preassigned document “catch phrases” or key words, the Net.Reports search engine searches your reports on text level, reviewing every single word and phrase in every document, so that nothing is ever missed.

Looking for a report containing the phrase “September Profit Margin”? The Net.Reports search engine will explore every one of your Net.Reports documents and return all results containing that phrase. Know that the amount “\$19,730.00” appears on the report you’re looking for? Type it in, and the search engine will offer links to any report containing that number.

Use of the PDF File Format

The PDF file format Net.Reports uses allows anyone who has the free (virtually universal) Adobe Acrobat Reader installed on their computer, to view and save the report to their files. This makes it easy for any user you want to view the files, without worrying about software versions, computer platforms, etc. (And, for those times when a printed report is required, Net.Reports PDF files can be easily printed.)

In Summary

Net.Reports enables users to easily access, archive, search, and protect valuable report information. These capabilities offer enormous potential for savings from increased process efficiency; decreased error rates; better access to report information; and increased levels of security of that information.
